

**KRAFT  
POWERCON**

**We help you release nothing but water**

Ballast water treatment powered by KraftPowercon

## **We can rectify the problem with polluted water**

A major concern when super tankers and other vessels travel around the world is microorganisms hitching a ride and causing havoc when released into a new environment. We help you free your ballast water from any harmful aquatic organisms before it is pumped out. KraftPowercon has a long history within electrochemical processes. This is also true for a marine industry and its very specific and challenging conditions where power supply must work faultlessly, even at sea. An international law regarding ballast water is waiting to be ratified, but we are way ahead of it and have, for many years, developed systems in this field. To do this, we use groundbreaking technology and rely on a global organisation with many decades of experience and know-how within industrial power supply.

# When you're at sea – we won't leave you stranded

It's simple. You are at sea, where there is no repair shop around the corner. In order to treat your ballast water, you must have a reliable power supply, as these processes simply must work, no matter what. Our systems and solutions are built and adapted to cope under these harsh conditions and will always guarantee your power supply.

## Relax – we don't get seasick

The efficiency and reliability of our solutions have been proven for decades, and we have been chosen to supply both coast guards and submarines with rectifiers. Using reinforced and modified rectifiers we guarantee power supply even when the sea is at its roughest. And, no matter what coastline you approach, when your ballast water treatment gets its power supply from KraftPower-con, you can safely empty your ballast water without harming local flora and fauna.

## Low costs and small footprint – a big business boost

The high reliability of our systems gives you a number of distinct advantages. The low power consumption means a small footprint and operating and maintenance costs are low. The latter is further fuelled by the modular design of our rectifiers. They are designed to improve uptime, and should maintenance be required you can run your system on reduced power, preventing costly standstills and downtime. Putting it all together, our power supply significantly improves your business by helping you to a safe, speedy and efficient ballast water management.

# There are many good reasons to choose KraftPowercon

Every customer has different needs and a unique process. Supplying the right quality requires a lot from a supplier and it must have long-term technical experience and enough know-how to tackle any circumstances. KraftPowercon is that kind of supplier. Our basic idea is to supply products and solutions that reduce life cycle costs and improves your business. Their high reliability cut downtime and associated costs and they can often be repaired on site and run on reduced power to avoid complete standstills. Furthermore, the high efficiency reduces energy consumption, a key issue today as well as in the future. We follow four guiding lights in everything we do:

- 1. You can always count on KraftPowercon**
- 2. KraftPowercon always has something new on the way for you**
- 3. KraftPowercon is right beside you**
- 4. KraftPowercon is your proactive partner**

We focus heavily on quality, and to us this means delivering on time and delivering the desired quality. This, together with our innovative ability, means you get a better value for money when choosing us. You know that we deliver the latest and best products and that we stand by our brand promise: we won't let you down.

## Service and after sales are natural to us

Our products are highly reliable and designed for continuous operation, but naturally maintenance, upgrades, repairs, installation assistance, education and training, spare parts and whatever you need to run your operation smoothly are high priorities for us.

## How about the future?

We are always exploring new fields and how to improve our offer to you. Our R&D department is constantly fulfilling the needs of today while keeping an ear to the ground to find out what tomorrow brings. Whatever they hear – we will interpret it correctly and act quickly ensuring that our products continue to be as efficient as possible.
