

The logo for KraftPowercon, featuring the word "KRAFT" in a bold, sans-serif font above the word "POWERCON" in a similar font. A white curved line underlines the "KRAFT" text and extends to the left.

**KRAFT
POWERCON**

A photograph of a large industrial power plant. In the foreground, there are several tall, white chimneys with red and white horizontal stripes. Behind them are several large, white, cylindrical cooling towers. The plant buildings are visible in the background, partially obscured by trees. The sky is overcast with grey clouds.

We ensure your uptime - all the time

Gas and steam turbines powered by KraftPowercon

We provide non-stop power for your critical drives

Continuous power supply is essential for gas and steam turbines and compressors as power failures could cause enormous damage to equipment and people. We secure the critical functions of your processes with solutions that guarantee an uninterrupted power supply and keeps availability high at all times.

KraftPowercon has a long history within this field. We know what it takes to ensure power supply in everything from fuel pumps to lube oil pumps, from turning gear to ventilation of enclosures – even during power disruptions.

Our solutions are designed for applications in power generation, oil and gas industry and gas pipelines – sometimes in tough environments and harsh conditions.

To do all this, we use state of the art technology and rely on a global organisation with many decades of experience and know-how within industrial power supply.

Critical functions should never be in critical condition

Your power supply must work at all times to safeguard the critical functions of your processes. Security breaches are unacceptable. Our uninterrupted motor drive (UMD) and DC and AC systems guarantee you an uninterrupted power supply. In the case of a power shortage, they immediately step in and switch to a battery backup that maintains full effect and makes sure the security of your operation isn't jeopardised.

Always available - no interruptions

We deliver the very high availability you demand. The single fault criterion ensures full functionality even if faults occur and our systems are designed for continuous and reliable operation under all conditions. They will even run on reduced power during service to maximise your output. In short, we guarantee your power supply and the highest possible availability, so you can focus on building a profitable business.

Carefully thought-out and fully flexible systems

We give you what you want – safety, cost-efficiency, maximal availability and shorter project lead times – with pre-engineered solutions that are configured, dimensioned and engineered to work perfectly for you. Meticulous work is put into all assignments and every system is rigorously tested before shipping. Our standardised modules make installation quick and easy and thanks to the modular designs they change in line with your business, making them highly flexible and scalable. To summarise: power may go down, but we make sure you can always steam ahead.

There are many good reasons to choose KraftPowercon

Every customer has different needs and a unique process. Supplying the right quality requires a lot from a supplier and it must have long-term technical experience and enough know-how to tackle any circumstances. KraftPowercon is that kind of supplier. Our basic idea is to supply products and solutions that reduce life cycle costs and improves your business. Their high reliability cut downtime and associated costs and they can often be repaired on site and run on reduced power to avoid complete standstills. Furthermore, the high efficiency reduces energy consumption, a key issue today as well as in the future. We follow four guiding lights in everything we do:

- 1. You can always count on KraftPowercon**
- 2. KraftPowercon always has something new on the way for you**
- 3. KraftPowercon is right beside you**
- 4. KraftPowercon is your proactive partner**

We focus heavily on quality, and to us this means delivering on time and delivering the desired quality. This, together with our innovative ability, means you get a better value for money when choosing us. You know that we deliver the latest and best products and that we stand by our brand promise: we won't let you down.

Service and after sales are natural to us

Our products are highly reliable and designed for continuous operation, but naturally maintenance, upgrades, repairs, installation assistance, education and training, spare parts and whatever you need to run your operation smoothly are high priorities for us.

How about the future?

We are always exploring new fields and how to improve our offer to you. Our R&D department is constantly fulfilling the needs of today while keeping an ear to the ground to find out what tomorrow brings. Whatever they hear – we will interpret it correctly and act quickly ensuring that our products continue to be as efficient as possible.
