POWERCON**

When it simply has to work, we have the solution

Uninterruptible Power Systems by KraftPowercon

We are always available.

Our customers have high demands regarding availability. They come to us since they know that our solutions guarantee the safety of their systems, even when there are interruptions in the power supply. They have to be totally protected from security breaches, and it is this assurance and reliability that our uninterruptible power systems (UPS) business area provides. We achieve this thanks to high-quality products packed with the latest technology, and also by always doing our utmost to support our customers and their operations from our first contact and then, just like our products, without interruptions and at full effect.

This is why we are an obvious choice for you

Our areas of expertise are within the energy sector and other businesses that demand highest availability, such as power plants, power transmission and the process industry. We have the extensive experience and deep technical know-how required to both eliminate dangerous stops and also increase the efficiency and improve the business side of your operations. We follow four guiding lights that will make your life brighter.

- 1. You can always count on KraffPowercon**
- 2. KraffPowercon always has something new on the way for you**
- 3. KraffPowercon is right beside you**
- 4. KraffPowercon is your proactive partner**

By adhering to these four guiding lights we are always there for you, providing insights and know-how during the development phase and giving you quick and correct assistance. We deliver fast and efficient solutions that create safer operations and contribute towards secure and more profitable processes. This allows for you as a customer to rely on us, relaxed in the knowledge that we will help you reach the best possible result – both in terms of efficiency and safety.

KraffPowercon, at your service.

Our products are built to run without interruptions for many years, but we have an accomplished service and after sales department who helps you with installations, repairs, spare parts, maintenance and training based on the needs of your organisation.

The future has no interruptions

The world changes in an instant, and so do we. We supply tested and fully functional solutions, but of course our R&D department works constantly on ways of improving and updating our products and services. We cannot know exactly what tomorrow will look like, but we will get there before anyone else does – and we'll deliver as efficient solutions as possible.

A quick look at our solutions

Uninterruptible motor drives (UMD) In critical processes, where interruptions to the power supply may cause serious damage or injuries our UMD systems are ideal solutions. They secure motor drives of critical processes, maintain full output if there is a power shortage and create a reliable and secure operation that can be more profitable.

DC systems We have the uninterrupted direct current systems you seek. They are small in size, easy to service and thanks to their modular structure; they can be adjusted in line with growths and changes in your business.

Charging rectifiers Our charging rectifiers with monitoring capability guarantee access to backup capacity. They can be replaced while running and have parallel modules, making their availability extra high and the operation more economical.

Inverters For plants where uninterrupted AC voltage is required, we offer inverters with a very high efficiency rating. They guarantee superb availability and make sure your operation is as secure and effective as it can be.

Battery and distribution modules To get the most out of your uninterrupted power system, you need the right design. We create the solutions you need and make sure that you get a safe and reliable operation.

Batteries We offer complete solutions including choice of battery type, sizing of batteries and ventilation and layouts for minimal use of space. Thanks to these systems the available power is secured during the entire product life in everything from power plants to communication equipment.
